

Patient-level nested cross-validation (leakage boundary)

All sample-dependent steps below the dashed line use only outer-training patients.

1 · Outer loop (repeat r = 0...9)

2 · Inside each outer TRAIN partition

Never used for selection / HP / scaler / ComBat-fit / τ^* :

outer-test labels and features · other patients' held-out visits

3 · Two AUC summaries from the same OOF scores
